

Documentation: Bulk QR Code Generation with QRMage

This guide provides a step-by-step workflow to generate 100 unique QR codes with a custom logo using **QRMage**. This process is 100% free, requires no registration, and produces high-quality images without watermarks.

1. Preparation

Before you begin, ensure you have the following assets ready:

- **Data List:** A list of 100 URLs, serial numbers, or text entries. Keep these in a Notepad or Excel file, with **one entry per line**.
 - **Logo Image:** A high-resolution square image (PNG or JPG). A PNG with a transparent background is recommended for the best look.
-

2. Setup & Configuration

1. **Open the Tool:** Navigate to qrmage.com/bulk-qr-generator.
 2. **Input Your Data:**
 - Find the text area labeled "**Enter URLs/Text**".
 - Copy your list of 100 items and paste them into this box.
 3. **Upload Your Logo:**
 - In the "**Customization Options**" section, click " **Upload Logo**".
 - Select your logo file from your device.
 4. **Set Error Correction (CRITICAL):**
 - Find the "**Error Correction**" dropdown.
 - **Select "High"**. This is essential when adding a logo to ensure the QR code remains scannable even with an image in the center.
 5. **Styling:**
 - **Color:** Choose your brand's color for the QR pattern.
 - **Background:** It is highly recommended to keep the background **White** for maximum scanning reliability.
 - **Size:** Select "**Large (512x512)**" or "**XL (1024x1024)**" for high-quality printing.
-

3. Generation & Export

1. **Start Generation:** Click the purple " **Generate QR Codes**" button.
 2. **Wait for Processing:** The tool will process all 100 codes in seconds.
 3. **Verify:** A preview grid will appear. Use your phone to scan one or two codes to ensure they work correctly.
 4. **Download:** Click "**Download All as ZIP**". This will save a single file to your computer containing all 100 individual PNG images.
-

4. Best Practices

- **Contrast:** Always keep a high contrast between the QR code color and the background.
 - **Logo Size:** Ensure your logo doesn't cover more than 30% of the QR code area.
 - **Testing:** Always perform a test print of one code before printing the entire batch of 100.
-

Summary:

- **Cost:** Free
- **Signup:** Not Required
- **Watermark:** None
- **Limit:** 100 codes per batch
